Connecting the App with higi

Download the higi app from your app store to your device, create a higi account and login.

Note: *higi app must be installed on your device for higi assessments to sync to Rolling Strong app.*

Right before starting a self health check at the higi station, login the Rolling Strong App, scroll to the **Health** button and select it, then scroll down and select **Connect Wearables.**

> On Connect Wearables, slide the higi connection button to the right (green)

You will be taken to a secured higi page, log in with your **higi account credentials** and authorize Rolling Strong. Once completed, go back to the Rolling Strong App, the higi connection button will be on green confirming connection.

From the Rolling Strong App **Health** button**:**
> select **Login to higi station** (this brings up the scanner)
> scan the QR code on the higi station login screen
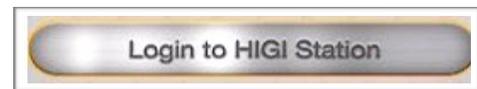

**if the scanner does not work, most likely you denied camera access at login. Go to your phone settings, allow camera and cellular data for higi and Rolling Strong and try the Login to higi again with the app scanner.

> **once logged into the higi station,** select the tests to perform at the station and complete

When tests are completed and your higi session is over, check that your higi assessment has synced to the Rolling Strong app by selecting the **Health** button > select **Past Assessments, you should see the green higi logo.** Select the **"eye"** on the assessment with a higi logo to view your higi station health check results.

**If higi test does not show in past assessments, user should check to make sure there is a valid higi connection (slider is green) and that Rolling Strong has been authorized in their higi account.
Go to connect wearables, higi connect button should be green.
User can also check their higi App that assessment taken at the kiosk is there, if not, most likely it will not show up on the Rolling Strong app and a connection issue would be with higi- contact higi support.https://higi.desk.com/
